Welcome to 2026!

Q1 2026

We reached peak winter just a few weeks ago here in Upstate New York. Like large swaths of the entire country, we were hit with a massive snowstorm that buried the area in a few feet of snow and ice. Since then, we've had extended periods of quite frigid temperatures. We know spring is supposedly right around the corner, but it's hard to imagine it when it gets this cold and icy outside.

Here at HVI, we're just huddling up inside where it's warm, and focusing on things we can control a bit more than the weather. We've got big plans for 2026, so this is a time for preparation and planning.

And of course, we're lining up and finalizing our conference and trade

show calendar for the year. We have some planned visits in Europe, Asia, the Middle East and of course here in the United States as well. Take a look at the Travel Calendar below for some of our very first shows.

Will we see any of you there? Drop us a line in on our inbox or a comment on one of our social media channels!

The banner features a yellow background with a faint image of high-voltage power lines and towers. The text is in a bold, sans-serif font. A white button with a black border is centered below the main text.

PRODUCT SPOTLIGHT

PFT Series - Versatile AC Hipots for Apparatus Testing

This quarter's Featured Product line is the PFT Series of AC hipots. This is one of HVI's "flagship" lines of equipment, used on every continent across the world for a wide range of high voltage testing applications, including:

- Hot sticks
- Vacuum bottles
- Rubber gloves
- Motors & Generators
- Switchgear
- Iso-phase bus
- ...and more!

These are among the lightest, smallest and most economical units available on the market, especially for those capable of delivering these power ratings and offering these features.

Ranging from 10kV to 100kV, there is a suitably sized and priced unit to fit your specific needs.

If you're in the market for a general purpose AC hipot, visit the [PFT Series page on our website](#).

If you need assistance in sizing or choosing an AC hipot or any other kind of hipot testing equipment, contact us at sales@hvinc.com

Spotted in the Wild: HVI Equipment Approaching 25 Years Old!

Our high voltage testing equipment is used all across the world, on all seven continents, including Antarctica. We will occasionally receive photos from former or current customers and/or colleagues, who come across our equipment "out in the wild".

One recent example comes from north of us in Montreal, Canada.

Our friends at [NDB Technologies](#) had one of our units come in for some general repair and re-calibration. Upon further inspection, it turned out that the unit in question was a PTS-75 unit, with Serial Number 001.

That means it was the very first PTS-75 we built, all the way back in 2002. That was 24 years ago!!

In an era of planned obsolescence, this kind of product longevity is a testament to how a lot of equipment used to be built, and how we still build it today. Quality engineering never has an expiration date.

Much thanks again to our friends at NDB for sharing this little piece of history with us. Pretty cool, huh? If YOU spot a piece of our equipment out in the field, send it our way - we love to see this stuff!

TEASER: FAQ Videos Coming to YouTube and Website!

Just a reminder that HVI has a YouTube channel!

We have sales and product operation videos for several of our most popular product lines, so if you're trying to decide on a hipot or other high voltage testing equipment, you can learn more about our wide range of offerings. We most recently added a video for our popular ALT Series of aerial lift testers, which you can [watch here](#).

We also know that when it comes to getting solid answers and information, content preferences have evolved over time. While our website has ample documentation for almost all of the most commonly asked sales questions we receive here, we will soon be adding FAQ videos as well. Stay tuned!

Be sure to visit and check back in the future for the rest of our video library at our main YouTube channel here:

HVI Attends IEEE Asia 2025 in Bangkok, Thailand

HVI had the pleasure of attending and exhibiting at the recent IEEE Asia show in Bangkok, Thailand at the end of 2025. We were joined by our friends at [Fifty-Hertz, LTD.](#)

We love meeting and greeting new faces, and we had some great conversations with folks, learning what they do within their roles and their in-field needs. We're a customer-focused company, so we love hearing direct feedback and on-the-ground industry observations.

Here's a photo of our own Ed Kirby, joined by some of the team from Fifty-Hertz. Thanks again for the hospitality fellas!

Speaking of travel , check out our Upcoming Events below to start out 2026! We hope to see *you* in the future as well.

UPCOMING EVENTS

Mar **AMPER Fair** [RSVP](#)
17-19 Brno, CZ

Apr **NWPPA E&O Conference** [RSVP](#)
16-19 Portland, OR

May **IEEE T&D Exhibition** [RSVP](#)
4-7 Chicago, IL
