PIONEERING THE FUTURE OF HV TESTING

The Holidays are here!

December 2021

The winter holidays are officially here! There is hot chocolate to warm our hands, Mariah Carey's "All I Want for Christmas Is You" following us, well, everywhere, and family and friends are preparing to gather all around.

As adults, we long to go back to the innocence of childhood--trying to stay awake to catch Santa Claus in the act. What child wouldn't want to wake up and find an PFT-503CM or, even better, an VLF E-Series tester under their tree! A lucky girl or boy could test quite a bit of apparatus or cables this year if they have been good.

We have been proudly serving you for 25 years

2022 marks our 25th year proudly serving clients and building the tools that keep America and the world running.

From the whole team at HVI, thank you for all your support!

To celebrate our 25th anniversary, we will be sharing some great content on the company's history, from its founding until today. Stay tuned to future newsletters and our social channels.

SERIES

AC Hipots for Factory and Field Testing

HVI offers a full line of AC Dielectric Test Sets up to 300 kV in voltage and 40 kVA in power designed for over-voltage withstand testing for sample or production testing applications.

These higher power AC dielectric test sets are commonly used for testing capacitors, insulators, switchgear, buss duct, hot-line tools, aerial lifts, bucket liners, transformers and other loads

that draw more current than a conventional AC hipot can output.

Specialty models also available designed specifically for motor winding, ASTM D149 testing, or as a power supply for performing Tan Delta, Power Factor, Partial Discharge, or other types of diagnostic testing.

The HPA series are designed and built here in the USA with either oil-filled steel or fiberglass high voltage sections, with well-designed, attractive controllers, and all the high-end features custom fit to your testing requirements.

Be sure to check it out and bookmark it at: <https://hvinc.com/products/ac-dielectric-test-sets/hpa-series/>.

If you need assistance in sizing or choosing an AC hipot, contact us at sales@hvinc.com

HVI Helps Identify Owners of Stolen Equipment

It's not every day you get a call from an out-of-state police department, but as our own Tom Grayson can attest, when HVI recently did receive such a call, we were able to reconnect a hard-working professional with his valuable test equipment.

From Tom:

"I received a call from Detective Jones of the Lexington, South Carolina Police Department. They had recovered what seemed to be stolen goods that had our logo and contact information. He told me the ID tag said it was a PTS-80, S/N 2301. He asked what it was, suggesting it might be an "amp." I told him it was a DC hipot for testing high voltage switchgear and cables. He just laughed because that meant nothing to him. I took his contact information and told him I would see if I could find out who it belongs to.

We keep a database of all models and serial numbers referencing the purchase date and customer. I found S/N 2301 was sold in May 2017 to an electrical contractor, Carolina Power, in Irmo, SC. I called the contact we had listed in our sales file and he answered the phone and confirmed that his test equipment had indeed been stolen two weeks ago. I gave him the contact info for the detective and let him take it from there.

We often will insert information about lost or stolen equipment into our database in the hope that whoever possesses the equipment will call for a manual or send it for calibration. We have reunited several customers with lost equipment in the past.”

What fantastic news and right before the holidays! Great job, Tom.

UPCOMING EVENTS

**March
1**

**Powertest
Conference/NETA**

Hyatt Regency at the Denver
Convention Center Denver CO,
USA

RSVP

**March
7-9**
